

# Connecting people and processes

Web-Ready

**InduSoft**<sup>®</sup>

Realize Your Potential

*InduSoft believes that you can have the best tools and the most competitive pricing, but the real value of any offering is the end result from the customer's perspective. Meet the customer's need and help them reach their goals. We strive for that every day.*

InduSoft has a very simple mission. We believe in the power of a good user experience, and we bring that conviction to everything we do. Whether it's by providing the most dedicated customer service in the industry, making a comprehensive and flexible application development platform, or by competitively pricing our software so that it's available to users on every end of the spectrum from small business to large, InduSoft believes in building good relationships and a good experience.

InduSoft was founded in 1997 with a clear purpose in mind: SCADA should be more than just the software it's built around. From the beginning, the end vision of InduSoft Web Studio was software that users could feel comfortable using over the long term. That's why applications created in the very first iteration of InduSoft Web Studio will still work with 100% compatibility today. That's why new drivers are always in development to connect InduSoft Web Studio to newly developed and existing hardware.

InduSoft has developed a comprehensive HMI and SCADA software solution that offers all the tools necessary to build exceptional supervisory control and data acquisition applications. The InduSoft software solution contains everything developers need for HMI, SCADA, web and cloud based applications, and dashboards such as OEE and KPI interfaces in one package, without demanding that users pick and choose which features are priorities. Everything is included, at cost effective pricing that allows even startups to compete in an international market.

***With hundreds of thousands of human-machine interface (HMI) and supervisory control and data acquisition (SCADA) applications installed worldwide, InduSoft helps organizations increase productivity and establish predictive and preventative maintenance strategies that result in optimum process uptime and availability.***

Today, InduSoft's strategy is to empower people and companies to develop graphical interfaces, integrate web based solutions, and take advantage of Internet connectivity. InduSoft strives to make the most current technology available to users, so that once an application is developed; it can be easily updated and changed to incorporate new and emerging technology, while still preserving the investment in current applications.

InduSoft provides leading-edge technology that uses internet connectivity to access data that is stored on industrial devices. In addition, InduSoft tools and technologies convert personal computers, web browsers, and remote productivity devices such as smart phones, laptops, and tablet PCs into industrial automation and test and measurement systems.

The cornerstone of solid technology is anchored by a commitment to customer support. We firmly believe that a SCADA software that is comfortable to use begins with a strong background of support. That's why we provide assistance in the form of an extensive Help file, phone support free of elaborate menus and outsourced call centers, and email support. We will assist any InduSoft user, whether they have a license for five hundred tags, or five thousand.

**InduSoft Web Studio** was the first HMI/SCADA package available on the Windows CE Platform. InduSoft began shipping Windows CE product in early 1997.

**InduSoft Web Studio** was the first HMI/SCADA package to incorporate XML.

**InduSoft Web Studio** was the first native web-based HMI/SCADA package.

**InduSoft Web Studio** is one of the few single-development environment for Microsoft platform independent applications in the industry today.

**InduSoft Web Studio** was the first to incorporate ADO.NET providing connectivity to SQL databases, even for Windows CE. InduSoft has a patent on this technology.

**InduSoft Web Studio** was the first to provide a module for online configuration from remote development stations, and the client does not need to be stopped for online configuration.

**InduSoft Web Studio** is the only HMI/SCADA package that runs on all Windows CE architectures such as ARM, MipsFP, PocketPC, PowerPC, SH4, SH3, X86, StrongARM, and more.

**InduSoft Web Studio** has maintained 100 % compatibility from V1.0 to V7.1.

## InduSoft Web Studio

- Acquires data in real time from a variety of real-world devices.
- Displays and accesses real-time, dynamic, and animated graphic screens, trends, recipes, and reports on the most popular web browsers.
- Imports and exports data in a variety of formats for easy integration with corporate and business applications.
- Integrates seamlessly with databases and the Microsoft Office Suite, thanks to patented database connectivity.
- Has a strong architecture that encompasses the latest standards and technology in wireless, mobile, distributed, and Internet based SCADA and HMI applications.

## Awards for InduSoft

InduSoft, through our partnership with Xycom, received the 1999 Control Engineering Editor's Choice Award for Bundled Hardware and Windows CE software solution – Open HMI (InduSoft Web Studio.)

InduSoft received Frost & Sullivan's Entrepreneurial Company of the year for 2005

InduSoft received Frost & Sullivan's European HMI of the year for 2007

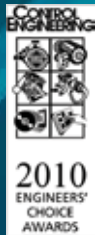

InduSoft Web Studio received Control Engineering Reader Choice Award for 2006 for most Innovative Product of the Year

InduSoft received Frost & Sullivan's Best Practice Award for 2010 Global Web- Based Human Machine Interface Customer Value Enhancement Award

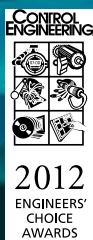

InduSoft received Frost & Sullivan's Best Practice Award for 2010 Global Best SCADA Software

InduSoft Web Studio received Control Engineering Reader Choice Award for 2010 for Best HMI Software

InduSoft Web Studio received Honorable Mention for Control Engineering Reader Choice Award for 2011 for Best HMI Software

InduSoft Web Studio received Control Engineering Reader Choice Award for 2012 for Best HMI Software

Software – HMI Software  
*InduSoft Web Studio v7.1*

Software – Applications, monitoring  
*BI Dashboard Template*

Software – Mobile apps for controls, automation, instrumentation  
*Mobile Access*

In 2013, InduSoft Web Studio received Control Engineering Reader Choice Award for 3 different products: InduSoft Web Studio v7.1, Business Intelligence Dashboard Template, and Mobile Access

## Certifications

InduSoft is a Microsoft Gold Certified Partner since 2003.

InduSoft is Motorola Certified.

InduSoft is AT&T Certified.

InduSoft has been a member of the OPC Foundation since 1998 and participates annually in the Interoperability meetings.

## Develop Once – Deploy Anywhere

InduSoft was the first HMI/SCADA software solution to be designed for Microsoft platform independence. That means that an application developed for any supported Microsoft operating system can be deployed on any other Microsoft system. An application created for a Windows 7 computer can also be accessed on a Windows XP embedded HMI, or a Windows Server application can be deployed on a laptop running Windows Vista without making any changes at all. This flexibility allows users the freedom to develop applications that do not rely on one particular Microsoft operating system or hardware platform.

### Deployment of InduSoft Web Studio

## Industry Dominance

InduSoft has been used to develop SCADA/HMI applications in countless industries worldwide. We have strong applications across the board, from industrial automation to pharmaceutical production and packaging. Here are a few of the industries that we have served with our groundbreaking software solution:

-  Oil and Gas
-  Water and Wastewater
-  Building Automation
-  Semiconductor and Electronics
-  Detention Systems
-  Packaging
-  Wind Power
-  Solar Power
-  Automotive
-  Pharmaceutical
-  Food and Beverage

InduSoft has been used to monitor everything from drag racing cars to major international hospitals and schools, and we have published over forty case studies on our website that showcase how InduSoft is used in a huge variety of applications. This highly flexible solution is attractive because it offers all the functionality required to maintain security and traceability in a SCADA or HMI solution. OEE (overall equipment effectiveness) can also be determined using InduSoft Web Studio, making this software an excellent tool for measuring and improving the productivity of any process.

## Worldwide Acclaim

InduSoft is built around internationally accepted standards for industrial automation. Everything from the drivers to the translation capabilities are created with an international audience in mind. InduSoft makes it easy to develop applications in any language, and easily make them accessible and easy to navigate for international use. One click translation, Unicode fonts that support many character sets and alphabets, and several development languages make InduSoft a perfect solution for making your process standard globally.

InduSoft is an international company, with offices in North America, South America, and Europe. Distributors for InduSoft's products can be found in nearly every country, from Africa, to the Middle East and Asia. Our certified system integrators are equally widespread, making it possible to purchase InduSoft products, or receive experienced HMI/SCADA integration nearly anywhere in the world.

## Dedication to Our Partners

InduSoft is designed with our partners in mind. We highly value our Distributors, End-users, Certified System integrators and our Original Equipment Manufacturers (OEMs). With strong communication and mutual support, InduSoft is widely used internationally as a flexible SCADA/HMI solution in countless industries.

## Support for Our Products

InduSoft prides itself on the excellent customer support that we provide our customers. InduSoft offers several levels of support, from Basic Support (where technical support is provided during regular business hours from any of our worldwide offices) to our Premier Customer Support (technical support around the clock).
